1956

This year we are featuring unbloomed seedling bulbs from more than 200 hand pollinated crosses. Twenty years of experimenting has taught us how to combine certain desirable traits, and our bulbs are producing many extremely fine seedlings in a wide assortment of colors. Remember that none of these seedlings have bloomed. Any worldbeater you may find among them is your own property, and you may register it as your origination, and dispose of it as you choose. Many of these bulbs were grown from crosses among our own seedlings which are outstanding. We also breed from many other varieties not included in our price list. The greatest thrill in glad growing lies in seeing these new varieties bloom for the first time, for they will differ in some respects from any other variety in the world. From our experience with customer response to our previous offerings of seedling bulbs we expect to make this the chief part of our business from now on. The quality of our be low.
